

UC Signpost Garden

XMP
mini-design challenge

The signpost garden is intended to be a flexible space incorporating landscaping practices that respond to the specific location, the attributes of the soil, climate and intended uses. As the garden will be temporary space during its trial period, it will be designed in a manner which will enable the space to be easily restored to its current state. The garden will explore three key themes:

1. Global Food Security
2. Sustainable communities (including aspects of social justice and equity)
3. Ecological awareness
